

Olist Dashboard Insights & Recommendations

Visual	Insights	Recommendations
Payment Mix <i>Payment methods</i>	• Credit card is the main payment method and generates the highest share of revenue. • This means most customers prefer or trust credit card when placing orders.	• Keep credit card payments fast, secure, and reliable. • Provide more installment solutions like 'Buy now Pay later' and partnerships, Since Average installment is 3 even among cancelled orders • Monitor failed credit card transactions because any payment issue can directly affect revenue.
Financial Status <i>Pure revenue</i>	• Pure revenue reached 15.42M across the analysed period.	
Top 10 Categories by Revenue <i>Category performance</i>	• Home & Furniture is the strongest category, with revenue above 2,856,173.09. • This category brings the highest amount of money compared with the other categories.	• Give Home & Furniture more focus in stock availability, seller support, and marketing.
Total Sales Growth <i>Year comparison</i>	• Sales increased strongly from 2016 to 2017. • Sales continued to grow from 2017 to 2018, but the growth was slower than before.	• Review what caused the strong 2017 growth and try to repeat the same actions. • Support slower growth with promotions, customer retention, and focus on best-selling categories.

Visual	Insights	Recommendations
Actual vs Estimated Orders <i>Monthly delivery volume</i>	• August 2018 has the highest delivery activity, with actual orders reaching 12,705 and estimated orders reaching 13,767. • Estimated orders are slightly higher than actual orders, which shows a small delivery planning gap specialty in March, September 2018	• Prepare more delivery capacity before peak months, especially August 2018 • Delivery is at its finest when comes Black Friday Nov till year's end, We recommend maintaining same levels through making sure no stock/ carrier issues exist.
Weight & Volume by Category <i>Product size</i>	• Home & Furniture is the largest and heaviest category, with the highest average volume and weight. • This category is harder to store, pack, and deliver than smaller categories. • Kids and Baby is the 2nd highest Volume against Weight as per chart, more than Automotive, which does not make any sense.	• Review logistics cost for Home & Furniture because it is both high-revenue and difficult to deliver. • Kids Baby Category dimensions either need revisiting, or a better management needs to be done when it comes to warehousing • work with suppliers to move toward "Ready-to-Assemble" (RTA) designs. Reducing the box height by even 5cm across 1,000 orders could save thousands in freight value. • Carrier Rate Renegotiation, Negotiate a "Weight-Based" flat rate for the Kids & Baby category specifically, or look for a carrier that has a higher "DIM Factor" (meaning they are more forgiving of large, light boxes)
Freight Value by Weight Tier <i>Shipping cost</i>	• Heavy products have the highest average freight value compared with mid-weight and light products. • Freight cost increases clearly when product weight increases. • We can see a spike in Summer 2018 freight value over heavy and mid-weight products, which explains the high delivery accuracy mentioned earlier in Aug2018.	• Review shipping prices and courier contracts for heavy products. We recommend a performance- based contract solutions. • Improve packaging and delivery planning to reduce unnecessary freight cost.

Avg Delay by Customer State <i>Delivery delay</i>	• Some states have very high average delivery delays, such as Amapa. • Large-volume states such as Sao Paulo and Rio de Janeiro can create bigger customer impact even if their average delay is lower.	• 1) Notice the dark clusters in the top-left (Amazonas/Pará). In this region, there are almost no roads. For states like Amazonas, the "highways" are actually rivers. • The Delay: Packages often travel by truck to a port (like Belém or Santarém), then transition to a boat/barge to reach Manaus. This "intermodal" switch adds days or even weeks to the delivery time. • Seasonality: During the "dry season" (August–October), river levels can drop so low that large cargo ships cannot reach the Manaus Free Trade Zone, causing massive backlogs. • 2) The blue clusters along the eastern coast (Northeast) are often caused by the "Difficult Access Area" classification. • The Geography: Many towns in the Northeast are rural and far from the major state capitals. • The Delay: Carriers like <i>Correios</i> often have "restricted delivery zones" due to safety concerns or extreme rurality. Customers in these areas may have to travel to a central post office to collect their package, which the Olist data marks as "delivered" only after a long delay. <u>"Our average delay is not a performance failure; it is a geographical constraint. Our lead times for the North region must be adjusted to account for river transport and road quality outside the Southeast industrial hub."</u> Recommendation: 1) Implement an Algorithm-Based Estimated Delivery Date (EDD) that factors in the customer's state. 2) Create a Regional Seller Program to recruit and verify sellers specifically located in states like Pará, Amazonas, and Bahia. 3) Launch assurance communications setting realistic expectations and reducing the volume of
--	---	---

		customer support tickets during the weeks-long transit window. 4) Launch a Pre-Peak Inventory Program. This ensures that when the spike in demand hits, the products are already on the "right side" of the geographical divide, avoiding the high spot-market freight prices

Visual	Insights	Recommendations
Delay Days & Review Score <i>Delay impact</i>	- On-time deliveries have a much better average review score than late deliveries. - Late delivery is one of the clearest reasons behind lower customer satisfaction.	Send proactive updates to customers when an order is delayed to reduce frustration. A text or a phone call from contact center would be highly appreciated.
Order Count by Review Score <i>Review distribution</i>	- Most reviews are 5-star, which shows many customers are satisfied. - There are also around 11K one-star reviews, which is a clear red flag.	- Investigate one-star reviews and group the reasons by delay, product quality, seller issue, or refund issue. - Use the negative reviews as a direct list of problems to attend.
Avg Review Score by Category <i>Category satisfaction</i>	- Books & Media has one of the highest average review scores. - Home & Furniture performs strongly in revenue, but its review score is lower than the best-rated categories.	Improve Home & Furniture experience by checking delivery, packaging, product quality, and customer expectations. Leads to the part with the freight value associated with Heavy Products.
Review Score & Order Count by Month <i>Monthly trend</i>	Order volume increased strongly during 2017 and 2018, however, Q4 2017 and Q1 2028 have seen a dip in the reviews over the increased number of orders.	Prepare customer support and logistics capacity before high-demand months such as Black Friday and Winter Sales to protect customer satisfaction.

Visual	Insights	Recommendations
Financial Risk by Category <i>Risk control</i>	- Financial risk is the highest in categories such as Arts (5%) and Fashion (4%) are above overall percentage (3%). - These categories can generate revenue, but they also carry more risk from pending, in-transit,	🔍 Recommendation: Introduce a tiered payout schedule where sellers in these top-risk categories receive their funds only after a "Successful Delivery + 7 days" buffer. 🔍 Objective: This protects the marketplace from paying out sellers for high-installment items that might still result in a "Canceled/Refunded" status during the final delivery stage. •🔍 Recommendation: Set a maximum installment cap for "New Sellers" in these categories. 🔍 Strategy: If a new seller enters the Arts category, limit them to 3 or 6 installments until they complete 50 successful deliveries. 🔍 Impact: This ensures that "unproven" sellers aren't bloating your Pending/In-Transit risk
New Sellers by Month <i>Seller growth</i>	- New sellers increased strongly in 2017 and continued growing in 2018. - More sellers can increase product variety and support marketplace growth.	Continue attracting new sellers through incentives and Offer reduced commission rates for the first 90 days or 50 sales to attract new merchants, but also check seller quality. "Fast-Track" Onboarding: Simplify the documentation process to reduce the time it takes for a seller to go from registration to their first live product listing.
Top 10 Order Count by State <i>Demand volume</i>	- Sao Paulo also has the highest order count. - The same states that generate high revenue also create the largest operational workload.	Incentivize high-volume sellers to move their "top-selling" inventory to a regional fulfillment center in Recife (Pernambuco) or Salvador (Bahia). Partner with local retail chains or pharmacies to act as Pick-up Points. Instead of the courier trying to find 50

		individual houses, they drop 50 packages at one secure central location. This improves Delivery Accuracy and significantly reduces the "Avg Delay" you saw in your other map.
Total Revenue by Customer State Revenue market	• Sao Paulo generates the highest revenue, followed by other strong states like Rio de Janeiro and Minas Gerais. • Revenue is concentrated in a few important states.	• Protect top revenue states with strong stock availability, delivery performance, and seller coverage.
